Education

Peking University Sep. 2022 – Expected Jun. 2027
PhD Student in Quantum Information and Quantum Computing *Beijing, China*

Peking University Sep. 2018 – Jul. 2022
B.S. in Physics and B.S. in Computer Science *Beijing, China*

Research Experience

Xiao Yuan's Group Apr. 2021 – Present
Center on Frontiers of Computing Studies, Peking University *Beijing, China*
Graduate Researcher in Quantum Information and Quantum Computing

- Developed resource-efficient quantum algorithms and theoretical tools for many-body simulation and information extraction, spanning variational, tensor-network-assisted, and early fault-tolerant approaches.
- Designed qubit-, measurement-, and sample-efficient protocols for estimating local observables and nonlinear quantum-state properties, including partial-transpose moments.
- Current projects include response-transform and counterdiabatic algorithms, fault-tolerant resource estimation, and learning and simulation of open quantum dynamics.

Yuanjie Exploration Sep. 2026 – Present
Research Intern in Quantum Error Correction

- Participating in quantum error correction research and product development.

Quantum Information Theory Group at Imperial College London Jul. – Aug. 2023
Electrical and Electronic Engineering Department, Imperial College London *London, UK*
Visiting Research Student

- Studied applications of perturbative quantum simulation to quantum information and many-body dynamics.

Research Interests

- Resource-efficient quantum algorithms for many-body simulation, eigenstate and dynamical problems, with particular emphasis on the early fault-tolerant regime.
- QEC/QEM-aware estimation protocols, algorithm–architecture resource analysis, and hybrid quantum–classical methods for quantum simulation.

Invited Talks & Seminars

Resource-Efficient Quantum Property Estimation: Partial-Transpose Moments and Quantum Fisher Information
The University of Tokyo *Oct. 2026*

Estimating Local Observables via Cluster-Level Light-Cone Decomposition
Nanjing University (online) *Dec. 2025*

Efficient Estimation of Global and Local Observables in Clustered Quantum Systems
Shenzhen International Quantum Academy *Jul. 2025*

Referee Service

Journal referee service: Physical Review Letters, Physical Review A, npj Quantum Information, Quantum
Conference referee service: AQIS, TQC

Awards & Honors

Award for Scientific Research, 2024–2025 Academic Year
Peking University *Dec. 2025*

Special Prize, China Youth Science and Technology Innovation Challenge Track
19th "Challenge Cup" National College Students' Extracurricular Academic S&T Works Competition *Nov. 2025*

3rd Place Award, Student Poster Presentation
AQIS 2023 Seoul *Sep. 2023*

Award for Scientific Research, 2019–2020 Academic Year
Peking University *Dec. 2020*

Award for Academic Excellence, 2018–2019 Academic Year
Peking University *Dec. 2019*

First Prize, National Final Round; Selected for the National Training Team
34th Chinese Physics Olympiad *Nov. 2017*

Selected Funded Projects

Participant, Beijing Natural Science Foundation: Youth Project on dynamical quantum phase transitions (2026–present); Interdisciplinary Key Project on practical quantum information processing (2025–present).

Patents

- Method and Apparatus for Quantum Variational Molecular Dynamics Simulation (CN119811513B)
- Hybrid Computing Method and Apparatus Based on Neural Network and Quantum Circuit (CN114742228B)

Poster Presentations

Estimating Local Observables via Cluster-Level Light-Cone Decomposition
AQIS 2026 Daejeon *Aug. 2026*

Simultaneous Estimation of Partial-Transpose Moments with Active Memory Independent of the Moment Order
AQIS 2026 Daejeon *Aug. 2026*

Efficient Estimation of Global and Local Observables in Clustered Quantum Systems
AQIS 2025 Hong Kong *Aug. 2025*

Error Mitigation via N-Representability conditions
TQC 2024 Okinawa and SEEQA 2024 Oxford *Sep. 2024*

Tensor-network assisted variational quantum algorithm
AQIS 2023 Seoul *Sep. 2023*

Teaching and Mentoring Experience

Peking University (Class Advisor / Undergraduate Cohort Counselor)
EECS Class 10 (Cohort of 2022) *Sep. 2022 – Jul. 2026*

Peking University (Teaching Assistant)
Quantum Information *2023 Spring*

Peking University (Teaching Assistant)
Probability and Statistics (A) *2022 Spring*

Specialized Skills

Languages: Chinese Mandarin (native speaker), English (fluent)
Programming Languages: Python (mostly used), C++ (familiar), Julia (beginner)
